Install R package ctrdata

Ralf Herold

2025-03-02

Install package ctrdata on an R system

The R Project website (https://www.r-project.org/) provides installers for the R system. It can be used with software products and graphical user interfaces such as R Studio, or Microsoft R Open, or from Visual Studio Code.

General information on the ctrdata package is available here: https://rfhb.github.io/ctrdata/.

In R, execute:

```
install.packages("ctrdata")
```

For using the development version of package ctrdata, install from GitHub:

```
# install package under development
install.packages(c("remotes"))
remotes::install_github("rfhb/ctrdata", dependencies = TRUE, build_vignettes = TRUE)
```

Either of the above should install package ctrdata into the user's library.

Databases to use

At this time, a PostgreSQL, DuckDB, an SQLite or a MongoDB (local or remote) database can be used with the package ctrdata. A full SQLite database is provided in the R package RSQLite. Suggested installation instructions for PostgreSQL are here and for a local MongoDB server are here; a remote MongoDB database server is accessible here. See here for a speed comparison of the databases; recommended: DuckDB, PostgreSQL or MongoDB local server.

Purpose	Function call
Create SQLite database connection	dbc <- nodbi::src_sqlite(dbname =
	"name_of_my_database", collection =
	"name_of_my_collection")
Create \mathbf{DuckDB} database connection	<pre>dbc <- nodbi::src_duckdb(dbname =</pre>
	"name_of_my_database", collection =
	"name_of_my_collection")
Create MongoDB database connection	<pre>dbc <- nodbi::src_mongo(db =</pre>
	"name_of_my_database", collection =
	"name_of_my_collection")

Purpose	Function call
Create PostgreSQL database connection	<pre>dbc <- nodbi::src_postgres(dbname = "name_of_my_database"); dbc[["collection"]] <- "name_of_my_collection"</pre>
Use connection with ctrdata functions	<pre>ctrdata::{ctrLoadQueryIntoDb, dbQueryHistory, dbFindIdsUniqueTrials, dbFindFields, dbGetFieldsIntoDf}(con = dbc,)</pre>

Attach package ctrdata

After completing the installation, attach the package from the user's library. This will also check the availability of the additional installation requirements as mentioned above:

library(ctrdata)

Remember to respect the registers' terms and conditions (see ctrOpenSearchPagesInBrowser(copyright = TRUE)). Please cite this package in any publication as follows: Ralf Herold (2025). ctrdata: Retrieve and Analyze Clinical Trials in Public Registers. R package version 1.21.0. https://cran.r-project.org/package=ctrdata
